SEO Strategy Report

qualifiedleadsx.com · Thursday, 12 November 2026 · all changes live on www.qualifiedleadsx.com and checked after deploy

1. Summary

99/120
sitemap URLs indexed (URL Inspection, 12 Nov; was 98/119 on 11 Nov)

423
impressions, last 28 days (6 clicks, 62 pages, 62 queries)

48.2 → 3.6 MB
results gallery images after WebP conversion

42
indexing requests accepted by Google today (27 + 15); 42 URLs sent to Bing

- Fixed the three cannibalisation / wrong-page problems that account for most non-brand impressions: “customer acquisition agency” (23 impressions on `/for/agencies`), “high ticket lead generation” (split across 3 URLs, blog hub ranking highest) and “qualified lead generation services / qualified appointments”.
- Published one new guide where Search Console shows a real query cluster: buying qualified leads vs generating your own.
- Cut mobile image weight on pages with the results gallery by about 85% (homepage 9.8 → 1.6 MB of images on a full scroll; PI mastermind 9.3 → 1.2 MB).
- Indexing audit: no broken sitemap URLs, no live canonical errors, no live schema errors. The 8 rich-result failures and 3 canonical mismatches in Search Console are stale crawls from before earlier fixes; recrawls requested.

2. Analysis

Search Console (13 Oct – 11 Nov)

Query	Landing page	Impr.	Position	Issue
customer acquisition agency / agencies / digital customer acquisition agency	`/for/agencies`	23	77–87	Wrong page: query means “an agency that acquires customers”, page is “client acquisition for agencies”
high ticket lead generation	`/blog` (9), strategies post (4), service page (2)	15	69–84	Cannibalisation: blog hub outranks the service page
cost per qualified meeting	`/tools/cost-per-booked-call-calculator`	10	83	Title did not use the phrase (fixed in this morning's session)
benchmark cac b2b	CAC benchmarks post	9	74	Description generic, no figures
facebook ads agency vs hiring an in-house media buyer	agency vs in-house post	9	4.0	Low CTR at position 4; snippet already numeric, too few impressions to judge
qualified lead generation services / company	`/` and `/lead-generation-agency`	9	75–96	Split between two pages; neither title used “qualified”
qualified appointment(s)	`/appointment-setting`	9	86–91	Title said “sales calls”, not “appointments”
buy qualified leads / buy coaching leads / buy solar appointments / qualified b2b leads / investor lead broker	homepage, blog, coaches, solar, investors	11	67–87	No page answers “should I buy leads” intent → new guide
guaranteed / preset / residential solar appointments	`/for/solar-companies`	7	48–76	“Preset” and “residential” not answered
the closer matrix reviews, facebook ads targeting for high ticket products, b2b roas	3 blog posts	13	8–19	Already retitled 10–11 Nov; left alone so Google can re-evaluate

Competitors and content gaps

- Closest competitors found in search for the core terms: LeadsNow AI (pay-per-booked-call for coaches), Cleverly (B2B outbound appointment setting), Belkins (B2B appointment setting) and Digital Rocket (high-ticket lead generation pages). The top results for “high ticket lead generation agency” are dominated by directory and listicle pages (Clutch, DesignRush and self-published “best agencies” lists).
- Gap: competitors publish buyer-guide content (“best agencies for X”, pricing, “should you buy leads”). The site had no page for the buy-vs-build decision; that guide was added today. Listicle-style “best agencies” pages were not created, because ranking yourself first in your own list is low-trust and adds little.

3. Optimised URLs (live)

URL	Change	New title
/	Title, description, OG/Twitter titles now target “client & customer acquisition agency”; new homepage FAQ “What does a customer acquisition agency do?” (also in FAQPage schema)	Client & Customer Acquisition Agency for High-Ticket B2B
/lead-generation-agency	Owns “qualified lead generation services”; removed “30–50 qualified calls guaranteed” from the description (replaced with the 90-day written guarantee wording)	Qualified Lead Generation Services: Done-for-You Agency
/high-ticket-lead-generation	Title adds “Agency”; blog hub now links to it with the exact anchor	High Ticket Lead Generation Agency for $3K–$25K Offers
/appointment-setting	Title uses “qualified appointments”	Appointment Setting Agency: Qualified Appointments Booked
/for/agencies	Links “customer acquisition agency” to the homepage so Google can tell the two intents apart	(unchanged)
/blog	Exact-anchor link to the high ticket lead generation service page	(unchanged)
/blog/b2b-client-acquisition-cost-cac-benchmarks-2026	Description leads with the post's own benchmarks ($800–$2,200 CAC, 4:1 LTV:CAC)	(unchanged)
/for/solar-companies	New FAQ: what preset residential solar appointments are and what to check	(unchanged)
/outsourced-sales-closers, cost per booked call calculator, speed-to-lead statistics post	Done in this morning's session (see SEO log)	—

4. Published content

URL	Target queries	Notes
/blog/buy-qualified-leads-vs-generating-	buy qualified leads, buy coaching leads, buy solar appointments, qualified b2b leads,	~1,270 unique words; shared vs exclusive vs appointments, real campaign costs (MVA $7.61/lead, solar $14.71–$26, investor seller leads $16.48–$28), 7 questions to ask a lead seller, 4 FAQs. Every

URL	Target queries	Notes
`your-own` “Buying Qualified Leads vs Generating Your Own (2026)”	investor lead broker	number comes from case studies already on the site. 13 internal links in.

No case study or landing page was added today: no new client data was available, and the existing case-study set already covers the industries with search demand.

5. Technical audit

Check	Result
Sitemap URLs (120)	All return 200 on the live site
Redirects	non-www → www and trailing slash → no slash both 308 to the canonical URL; 404s return 404
Canonicals	All live pages self-canonical. Search Console still shows 3 calculators with canonical “/” from crawls on 6–7 Nov (before the fix); Google already picked the right URL. Recrawl requested.
Structured data	Local validator: 0 errors. Live check of the 8 pages Search Console flags: every BreadcrumbList has items and every breadcrumb reference resolves. Flags are from crawls on 6–10 Nov, before the 10 Nov fix. Recrawl requested.
JavaScript rendering	Page content (including today's FAQ and new post) is in the server-rendered HTML
Images	Results gallery: 60 PNG/JPG screenshots (up to 2.4 MB each) served raw → WebP max 1200 px with width/height (48.2 → 3.6 MB). Other galleries already use optimised images.
Core Web Vitals (lab, mobile, 4× CPU, slow 4G)	LCP 1.1–2.8 s and CLS 0 on all pages tested. Homepage Total Blocking Time 2.6 s (3,358 DOM nodes, 3 animated shader backgrounds, several video sections) — needs profiling; see recommendations.
Internal links	0 broken links, 0 orphans; every indexable page has ≥ 5 links in; titles ≤ 60 and descriptions ≤ 155 on all 121 indexable pages
Crawler access	Googlebot, OAI-SearchBot, PerplexityBot, ClaudeBot: 200. Bingbot user agent: 403; GPTBot: 429 (Hostinger; owner action)

6. Indexing

Status (URL Inspection, 12 Nov)	Count
Submitted and indexed	99
Discovered – currently not indexed	12
URL is unknown to Google	9 (includes the new PI mastermind page, published 11 Nov)

- Google Indexing API: 27 accepted this morning (not-indexed URLs + new pages) and 15 accepted now (today's new and changed pages, plus stale rich-result and canonical pages). 0 failed. Accepted means Google received the request, not that the page is indexed.
- Bing: the same 42 URLs submitted. Bing read all four sitemaps on 11 Nov; 0 impressions so far.

7. Authority and backlinks

- **Journalist-request platforms:** Qwoted, Featured.com and Source of Sources (free, from HARO's founder) send requests for expert quotes; “Help a B2B Writer” suits B2B topics. The site's original data (`/benchmarks`: close rate, show rate, CPL by industry, Meta CPM) is the strongest asset to quote from.
- **Podcast guesting:** agency-owner and coaching podcasts; pitch a topic (e.g. “why booked calls don't show up”, using the show-rate data), not the service.
- **Directories:** Clutch, DesignRush, GoodFirms, Sortlist, Crunchbase, LinkedIn company page. Copy is ready in `docs/growth-playbook/brand-profile-kit.md`; these need the owner's accounts.

These need the owner (accounts, reviews, interviews); nothing was submitted on the owner's behalf.

8. Recommendations

1. Owner: Bing Webmaster Tools → URL Inspection → Live URL on the homepage; if Bingbot gets 403, ask Hostinger to allow verified Bingbot.
2. Owner: create Clutch and DesignRush profiles and request 3–5 client reviews; sign up to Source of Sources and Qwoted and answer marketing / lead-generation requests with benchmark data.

3. Homepage performance: profile the 2.6 s blocking time and defer the animated backgrounds and below-the-fold video sections on mobile, without changing the design.
4. Re-run URL Inspection on 15–16 Nov to confirm the 8 rich-result pages and 3 calculators are recrawled clean, and track the 21 not-yet-indexed URLs.
5. Re-check positions for “customer acquisition agency”, “qualified lead generation services” and “high ticket lead generation” in 7–10 days; if the homepage doesn't pick up the first, add a short on-page section on what a customer acquisition agency does.
6. Thin service-for-industry pages (meta-ads-for-*, appointment-setting-for-*) remain the largest content backlog; upgrade 3–5 at a time with real case data.
