QualifiedLeadsX™ — Daily Work Report

Monday, November 3, 2026 · Property: qualifiedleadsx.com · SEO, Internal Linking & Structured Data

51 In-Body Internal Links Added Across all 12 guides	**14** Schema Node Types Live WebPage, BlogPosting, VideoObject, ProfilePage, CollectionPage…	**5** New Indexable Pages 4 category hubs + RSS feed	**7** Money Pages Now Linking to Guides Services, industries, case studies, mastermind

1. Work Completed

Contextual Internal Linking Across All 12 Guides [Completed]

Built a lightweight inline-markup renderer (RichText) so editorial copy in lib/blog-data.ts can carry [text](href) links without JSX. Ran a two-pass contextual linker that inserted 48 in-body links keyed to topic phrases (speed-to-lead, VSL funnel, qualification filter, broad targeting, CAC, close rate, SDR, ROAS…), capped at 7 per post, one per target, never self-linking. Hand-wrote link-rich closing sentences for the 3 posts with few natural phrase matches. Every guide now links to 3–7 sibling guides plus the relevant service page; category breadcrumbs are now clickable.

Detailed Rich Snippet / Structured Data Upgrade [Completed]

Introduced lib/schema.ts with shared @id-linked nodes (Organization, WebSite, founder Person, publisher logo ImageObject with dimensions). Blog posts now emit a full graph: WebPage (primaryImageOfPage, breadcrumb, ReadAction) + BlogPosting (Person + Organization authors, ImageObject 1376×768, timeRequired, articleSection, about, keywords, wordCount, speakable CSS selectors wired to the AEO answer block) + BreadcrumbList with @id + FAQPage with @id. Homepage gained VideoObject for the YouTube VSL and an ItemList of 3 self-hosted training VideoObjects with ISO-8601 durations, plus a WebPage node. About page gained ProfilePage with mainEntity → founder. Organization gained slogan and serviceType. Fixed 4 schema blocks that referenced missing /og.png and /icon.png files.

Blog Category Hub Pages [Completed]

Added statically generated /blog/category/{funnel-strategy, paid-advertising, lead-qualification, scaling-economics} with unique titles, meta descriptions, canonical tags, CollectionPage + ItemList + BreadcrumbList schema, crawlable category links on the blog hub, cross-links between categories, and sitemap entries with lastmod derived from the newest post in each category.

#CategoryHubs #CollectionPage #Sitemap

Further Reading Blocks on Money Pages [Completed]

New server-rendered FurtherReading component placed on /meta-ads-agency, /appointment-setting, /for/coaches, /for/consultants, /for/agencies, /case-studies and /mastermind, each hand-mapped to the 4 most relevant guides. Closes the loop so commercial pages pass equity to content and vice-versa.

#InternalLinking #ServicePages

RSS Feed, Sitemap & llms.txt [Completed]

Added /feed.xml (RSS 2.0 with Atom self-link, Dublin Core creator, category and cover enclosure per post) and a site-wide <link rel="alternate"> so feed readers and AI crawlers can discover new posts. Sitemap now lists 33 URLs including the 4 category hubs. llms.txt updated with category hubs and the feed.

#RSS #Discovery #AEO

Verification [Completed]

TypeScript, ESLint (0 errors) and production build (41 static pages) pass. Programmatic checks on build output confirmed: zero schema image references to missing files, zero leftover raw link markup, speakable selectors present in

DOM, 12 feed items, 33 sitemap URLs.

2. Next Actions

• Confirm the VideoObject uploadDate values (set to 2026-09-15 as a placeholder) match when the VSL and training clips actually went live.
• Resubmit sitemap.xml in Search Console and run `npm run index:google` to request recrawl of the 4 new category pages and all 12 updated guides.
• Validate one blog URL and the homepage in Google's Rich Results Test after deploy.
• Monitor Search Console → Enhancements for Video and Breadcrumb reports over the next 2 weeks.
