QualifiedLeadsX™ — Daily Work Report

Wednesday, November 4, 2026 · Property: qualifiedleadsx.com · SEO, Internal Linking & Content

26 New In-Body Internal Links 21 phrase-matched + 5 hand-written	**29** Glossary Terms Published DefinedTermSet schema, 58+ outbound links	**2** New Guides Published Speed to lead stats · VSL script structure	**0 / 0** Link Audit Result Broken links / orphan pages across 33 pages

1. Work Completed

Internal Link Graph Audit Tool (scripts/audit-links.mjs) [Completed]

New `npm run seo:links` crawls every prerendered page, builds the internal link graph (ignoring schema URLs) and reports broken internal links, orphan pages, pages with fewer than 3 inbound links, heading hierarchy skips, images without alt, missing/duplicate title, missing description or canonical, and title/description length. Baseline run: 0 broken, 0 orphans, 7 heading-skip pages (h2→h4) caused by two shared components; fixed by promoting those headings to h3. Final run: 0 broken, 0 orphans, 0 low-inbound, all 33 indexable pages with exactly one H1, alt text, canonical and description.

Client Acquisition Glossary Hub (/glossary) [Completed]

29 plain-English definitions (speed to lead, VSL funnel, blended CAC, ROAS, lead qualification, appointment setting, SDR, self-liquidating offer, unique mechanism, Conversions API…) built as an A–Z page with anchor index. Every term links to its in-depth guide(s), the part of the QualifiedLeadsX system that handles it, and related terms, making the page a 58+ link internal hub for definitional queries. Emits DefinedTermSet + 29 DefinedTerm nodes, BreadcrumbList and a speakable WebPage. Linked from the footer, blog hub, every blog post, the 404 page, sitemap and llms.txt; already the most-linked content page on the site (36 inbound).

Two New Guides: Speed to Lead Statistics and VSL Script Structure [Completed]

'Speed to Lead Statistics 2026' (Lead Qualification) collects the HBR, MIT/InsideSales and Velocify response-time findings, explains intent decay for high-ticket offers, sets 2026 benchmarks and documents the 60-second WhatsApp/SMS/email follow-up stack. 'How to Write a VSL Script: 12-Minute Structure' (Funnel Strategy) gives the six-act script with timing, example lines, production notes and the mistakes that depress application rates. Both carry AEO summaries, 5 FAQs with internal links, inline graphics, and were wired into FurtherReading blocks on /appointment-setting, /for/coaches and /mastermind.

Internal Linking Expansion Across All 14 Guides [Completed]

Third linker pass added 21 phrase-matched in-body links (response time, unique mechanism, 60 seconds, hook, setter…) pointing at the two new guides and back out from them; 5 older guides with no natural phrase match received hand-written closing sentences linking to both new guides and the glossary. The 14 guides now carry 72 in-body contextual links plus FAQ links; the new guides have 16 and 14 inbound links on day one.

Site-Wide Crawl Paths [Completed]

Footer gained a 'Guides by Topic' column (4 category hubs, glossary, RSS) on every page. Blog hub category row and every post's Related Guides header now link to the glossary. 404 page links the glossary. Sitemap: /glossary added (36 URLs). llms.txt: glossary section and both new guides.

On-Page Hygiene [Completed]

Fixed h2→h4 heading skips on the homepage, case studies and all mastermind pages (Testimonials and Lightbox components). Shortened category hub titles and the two longest post titles so title + brand stays under 65 characters; trimmed the three new meta descriptions under 160 characters. Schema validator re-run after all changes: 1,889 nodes, 0 required-property gaps, 0 missing files.

2. Next Actions

• Upstream page titles on /blog, /for/*, /case-studies and /mastermind* exceed 65 characters once the brand suffix is added (66–74). They follow the master-plan 55-char rule, so left unchanged; consider dropping the ™ suffix or trimming 5–10 characters if Search Console shows rewritten titles.
• Resubmit sitemap.xml, run `npm run index:google` and the IndexNow script so /glossary and the two new guides are crawled quickly.
• Confirm CONTENT_LAUNCH_DATE (2026-09-15) in lib/schema.ts for video and mastermind Article dates.
• Add `npm run seo:validate` and `npm run seo:links` to the deploy pipeline so regressions fail the build.
